Art Unit: 1626

Claims 1-2 are pending in this application.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: the invention relates to a process of making hexamethylenediamine (HMD) and aminocapronitrile (ACN) comprising hydrogenation of adiponitrile (ADN) with hydrogen in the presence of a hydrogenation catalyst to obtain HMD, ACN, THA and unreacted ADN. HMD and THA are obtained by distillation as distillate, which are further hydrogenated with hydrogen in the presence of a hydrogenation catalyst to produce HMD and HMI. The MHD is subsequently isolated as distillate.

The closest prior art of Luyken et al., US 20030023083 A1, discloses a process of making hexamethylenediamine (HMD) and aminocapronitrile (ACN) comprising hydrogenation of adiponitrile (ADN) with hydrogen in the presence of nickel or cobalt as a hydrogenation catalyst to obtain HMD, ACN and THA. See paragraphs [0003] and [0014]. However, HMD or ACN is obtained as the distillate while THA or other impurities are at the bottom of the distillation apparatus. See paragraphs [0030-0031].

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
